6. PRE-PRIMARY TEACHER TRAINING

1. INTRODUCTION:

Early childhood education is a programme, which provides a stimulating play environment for Physical, Intellectual, Language, Social and emotional development of the child. It prepares children for the primary and it focuses on the holistic development of the child. It lays the foundation for the development of reading, writing and number work. It is a programme which encourages interaction with the environment, active participation in group activities and enhances creativity and problem solving in children. It stresses on providing first-hand experiences to children in ways that would ensure, development of skills related to the process of learning. It also stresses on prior planning and scheduling but it at the same time flexible to children’s needs. Early childhood education is a programme which indirectly promotes self control and thereby inner discipline in children.

The importance of early childhood education is now a well recognized fact, that children need enriched environment, intellectual stimulation and plenty of opportunity for socialization of the same age group from a very early age are now known to a large section of people. Along with this awareness there are some economic and social factors which are also compelling people to put their children in schools from a very early age. The fact that children coming from economically and culturally deprived homes need some readiness programme, to put a stop to huge wastage and stagnation in first few grades of primary education has been realized by the planners of universal primary education. All these factors have created a large demand for pre-school education in the country and as such the number of pre-schools and enrolment of children in pre-schools has been increased considerably. The number of teachers working in Primary School has also increased with minimal of required training.

The success or failure of a Pre-school depends on the teacher who is the backbone of the Pre-primary school, Dr.Smt. R. Muralidharan states that the success of the developmental plan in pre school education depends to a large extent on the quality of the teacher education programme in the country. Therefore adequate and extensive teachers training programme is important for proper awareness and expansion of pre-school education programme in this country.
